

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

THE DECORATOR AND FURNISHER.

USEFUL FURNITURE.

ASTLAKE was the champion of simple, artistic and unvarnished furniture, as opposed to the school of carved, shaped and varnished furniture, which he characterized as senseless and extravagant. He held that the curves on the backs of sofas, side-boards and chairs, which were derived from traditions of the Louis Quatorze period, as a detestable system of ornamentation, involved additional expense in the manufacture, and presenting the greatest amount of ugliness for the least possible amount of comfort. While it is unnecessary for us to applaud his condemnation of forms that are in themselves really beautiful, there are a great many people who admire his idea of furniture that is free from pretention, well constructed, simple, strong and serviceable, and at the same time presenting a picturesque appearance, proving that it is not wholly destitute of merit.

The Eastlake style is a reproduction of ancient workmanship, both as regards joinery and decorative carving. A great deal of modern ecclesiastical work is mediæval in character, but it is quite possible to obtain mediæval forms without their being necessarily Gothic. Although in the middle ages there was but one form of architecture, no one ever thought of giving an ordinary domestic house the appearance of a church, or allowing a church to appear anything but what it was. Each building proclaimed its object by a certain fitness of arrangement, which it was impossible to mistake.

The honest burghers of the middle ages were ashamed of furniture that would not last a lifetime, and that could be

FIG. 1.—DINING-ROOM FURNITURE.

bequeathed in a sound condition to posterity. In former days, when the principles of good joinery were really understood, articles were constructed of very simple, but picturesque designs, that were sound in every principle of construction. Nowadays the idea is to produce furniture that requires to be continually replaced. Nine-tenths of our modern furniture is weak, badly made, and freely coated with varnish that produces a glossy effect that is destructive of artistic finish.

Again, in modern houses there is at present a fashionable conceit of fitting up the separate apartment each after a style of its own. Thus we have Gothic halls, Louis Quatorze drawing-rooms, Louis XV. boudoirs, mediæval dining-rooms, etc., all under one roof. All this is evidence that a healthy and genuine taste is altogether wanting in house furnishing.

The difficulty in procuring really desirable art furniture at a moderate cost is the fact that manufacturers will offer a solid, gloomy and cumbersome class of furniture on the one hand, or a flimsy and extravagant one on the other as the only choice, and another universal obstacle is that the cost is beyond that which can be afforded by people of ordinary means.

In illustration of a style of furniture that contains none of

these objectionable features we present our readers with several designs of dining room, library and bedroom furniture, each piece of furniture indicating by its general design the purpose to which it is applied. Fig. 1 is a set of furniture constructed of solid oak, with antique oak finish. The sideboard is a plain and straightforward piece of furniture, having a shelf on which and on top of the sideboard are displayed some pieces of rare porcelain. There is a leaded glass panel in the upper cupboard door, and the fittings are of hammered iron. A piece of furniture of this kind gives a picturesque appearance to the dining-room. The chairs are upholstered and covered in frieze cloth or tapestry.

Fig. 2 is another set of furniture also constructed of oak, with the antique finish. The sideboard has a mirror in the back, and wrought iron finish, and the chairs have movable seats of woven rush, and, as will be seen, are substantially made.

These sketches fulfill the first and most essential principle of good design, namely, that every article of furniture should, at the first glance, proclaim its purpose.

Fig. 3 is a dresser or buffet of simple construction and less elaborate in detail than those of Figs. 1 and 2. It is made of

oak, is well constructed and picturesque in appearance, and is excellent for rooms of moderate size.

Fig. 4 is a mantel-fitting in oak suitable for a dining-room.

Fig. 5 is an illustration of rush seats and chairs and a rush-seated settee or sofa, all of simple, yet beautiful design.

Of all the rooms in the modern house that which is used as a library or study is the one least likely to offend the fastidious taste by its appointments. Here the furniture, which is usually of oak, is strong and solid. Fig. 6 is a bureau bookcase, which may be constructed of either oak, mahogany or walnut. The best plan of finishing it is to rub the natural wood with oil. This will relieve it without varnish. This will bring out the grain of the wood and will allow it in due course to become darker in color.

Fig. 7 is a more elaborate design for a bookcase that may be made of oak, walnut or mahogany, with either iron or brass fittings, and with leaded glass in the doors. In these designs, the shelves intended for books are not covered with glass doors, as such an expedient involves unnecessary trouble and prevents ready access to the books.

It is not advisable for bookcases to have all the shelves en-

THE DECORATOR AND FURNISHER.

tirely taken up with books, for nothing is so pleasing as to have a few specimens of art manufacture also exhibited. Examples of rare old porcelain, of ivory carving, of ancient metal work, of enamels, Venetian glass, or anything which illustrates good design and skillful workmanship, may be exhibited. Even a Flemish bear jug or a Japanese fan will educate the eye in decorative form and color.

The modern bedroom, in addition to a bed, has for furniture a wardrobe, washstand, dressing table, a cabinet table and chair. While all these furnishings are different from each other, the general principle of design should be the same. As a proof that excellence of design can be had without a necessary dependence on cost, the set of bedroom furniture represented by Fig. 8 will demonstrate. This set of furniture, if made in ordinary wood, and stained a delicate palm leaf green, finished to a dull surface, will prove a very desirable furnishing for a bedroom. The washstand has maize-colored tiles with copper fittings. The entire set consists of wardrobe, washstand, dressing table, cabinet table, and three chairs. The shape of the various articles could hardly be improved upon. The style of the design inclines to Arabic rather than any other style.

While a lady's taste ought to be allowed to reign supreme as to bedroom furniture, yet the practice of encircling toilet tables with muslin petticoats and glass with muslin frames ought to be condemned, as drapery of such a kind is neither wanted nor ought to be introduced in such a place. If the design of the furniture is good in itself, it requires no further enrichment.

LOOK around your friends' houses to day and figure up what the rugs, ornaments, curtains and other beautiful things cost, and notice that in many of these handsome rooms books are wholly missing or confined within a book case about double in value of all the books it contains. It cannot be that these

FIG. 2.—DINING-ROOM FURNITURE.

people, who have card-receivers, fans, paper-cutters, china, silver, crystal and brass bric-a-brac without end, have not the wherewithal to buy books. True, many of the beautiful things have been given to those with whom we see them. But why did not the givers think that books would be as much appreciated as statuettes, foot-stools, lamps, vases, etc.? Because neither giver nor receiver have yet been awakened to the true value of books and their important place in the furnishing of any house that is to be a home of happiness and progress.

It is strange how general is the custom of borrowing books. The possessor of books that he truly loves and has collected at expense of time and money is almost expected to lend them. Why? You never think of asking a friend to let you enjoy his beautiful cast of a noted statue, his costly reproduction of an oil painting in your drawing-room for some two, three or four weeks. When you want these things so much that you cannot do without them, you devise ways and means to get them.

But the average reader does not have the earnest wish to own books. He wants to read the latest novel, and he looks for a friend who has bought it, and borrows it. It is a great lack of proper education that makes people content to read each

other's books. We are not preaching selfishness; on the contrary, we are pointing out that if the right spirit were in readers they would deny themselves many things to have books, and would spend less time reading newspapers, and learn to desire more lasting mental food. We believe in all things that are beautiful, and are glad at the growing taste for home decoration and the collecting of fine furniture and pretty knick-knacks. But we wish these things to do their proper work, to inspire their possessors with a desire to know what these things really are, where they came from, who made them, why so many of them are almost priceless, etc., and to have the elementary education that enables them to find and want the books that can give them such information.

In many things we are making giant strides towards better things. But the real love of books is still rather a weak seedling in our lives, and we are not training it as carefully as we should and as our domestic prosperity would enable us to do. There are no friends like books, and nothing is so calculated to make your friendship valuable as a well-stored mind and wide and varied interests that only come by reading good books.

With the holiday shopping season coming on, think care-

fully of your friends and their special tastes, and see how much real, lasting pleasure you can give them with books. Even should they not read them, the very atmosphere of books is far more invigorating than tidies, lamp shades, easily knocked over nondescript vases and ornaments.

Nothing grows so fast by what it feeds on the taste for reading, which should always lead to an earnest desire to possess and hold fast what is truly of worth.

SPIDERS' webs are seen on many of the new screens. They can be managed by amateurs in this way: Over a plain panel of coral Roman satin draw from top to bottom a length of gold and coral tinsel cord; repeat from side to side and corner to corner. Now weave the web of the same fine tinsel cord in and out the lengths of the cord that have been drawn across the panel. Each thread of the web should be at least an inch from the preceding one. This, with an artificial spider, or insect or two, finishes the panels. Other panels may be of the coral satin, or slightly embroidered with drooping sprays of a vine falling half way down.

THE DECORATOR AND FURNISHER.

HOME-MADE MOSAIC WORK.

BY ZEPHOS.

DOES this seem almost an impossibility to many of our readers? It would not be surprising if such were the fact, as the art has been classed for years among the higher branches of decorative work.

As a matter of course, this paper will not allow of its being carried to any great extent into the higher branches, in fact not beyond its simpler rudiments, but far enough to tempt some diligent and ambitious art amateur to further effects on his or her own behalf.

Mosaic is a work of art in which a design is produced by joining together small pieces of hard substances either naturally or artificially colored. Stone and glass are generally used for the purpose, the former predominating, but of late years mosaics of stained glass for the decoration of the interior surfaces have become quite popular, and in many cases carried out quite successfully.

The art of mosaic-making is of extreme antiquity; it being almost instinctive with man, as soon as he attains any idea of decoration, to lay parti-colored stones together in patterns.

FIG. 3.—BUFFET.

In its simplest and crudest adaptation it may be formed into patterns of black and white pebbles, which, with a setting of close-cut grass, may be very effective, and a neat addition to a well-kept garden.

But for our interior decoration; how shall we set about it? Simply enough.

Let us suppose we have a small vestibule or entry way that we propose to decorate in this manner, during leisure hours.

To begin systematically, we must first lay out our plan or pattern to work from. Let this be on a scale large enough to show the small details, sufficiently large enough to enlarge upon in the working drawing.

Now, supposing our vestibule to be 8 feet by 8 feet in size (quite a small one, but plenty large to begin on), now this is perfectly square in shape, we will divide it into four equal parts or quarters—as shown by the drawing—for several reasons; to-wit: as the design is but a repetition of this quarter section, it will only be necessary to draw a full size detail of this portion, thus saving time; again this will be as much

ground probably as the amateur can cover at a time, when he gets down to the actual work of inlaying.

Now lay out the quarter section detail carefully the full-sized required, showing each piece, and indicating in color (water colors) the general tones in their proper places.

Next, as to the materials to work with; get together all the pieces of colored marble stone and bits of colored tiles, that will be necessary to cover the space. These may readily be obtained; the tiles are broken bits of no use to the dealer, who will probably allow you the pick of the workshop waste, and any marble yard will afford clippings in many colors.

Now, with a bricklayer's hammer, which has one end chisel-shaped, and the other square, break your bits into the shapes and sizes required, with a smart, sudden tap; the morsel to be fractured being held by the thumb and finger, on a small square bar of iron; the top of a large spike driven into a solid base, will answer the purpose nicely.

To prepare your floor for working, remove the top flooring, with the exception of a narrow strip of wood all around the space next the wall, as shown on the drawing.

FIG. 4.—DINING-ROOM MANTEL.

Take as much space as you think you can cover in the time allowed by circumstances for the laying, and cover with a mosaic cement, composed of powdered stone, lime, and linseed oil, to the thickness of probably one-quarter of an inch. When set, this is again covered with a layer of plaster of Paris. Having your pattern before you, lay it lightly over the cement and prick through the outline into the plaster, or better yet, use the pattern wheel, a drawing of which is shown here.

The different bits and pieces of marble and tiles should be sorted out according to colors, in little trays or boxes so as to be at hand when needed for speedy use. Now, select your colors and proceed to lay out your pattern, with great care, but as much speed as possible, as the cement dries quite quickly, first dipping the piece in liquid cement before laying in place—this process being repeated until the design is finished.

The next step is to remove with a sharp thin chisel, all the plaster of Paris that appears above the surface of the design, and when thoroughly hard and "set," the stone or marble portion of the floor must be "holy-stoned" or rubbed down to an

THE DECORATOR AND FURNISHER.

even surface, of course using care not to rub the glazed surface of any bits of tile that may have been used.

The whole floor may be composed of bits of tile of varied

FIG. 5.—SETTEE AND CHAIRS.

colors, using care in the joining, and so no polishing will be required.

Another and a more delicate method may be used for finer

work, such as panels for wall spaces, by roughly drawing and tinting the pattern in the required colors on a sheet of paper; arrange carefully the bits of colored glass or marble—and in this case very small pieces may be used—in a box not unlike a compositor's type-case, which must be set up before the worker for ready use.

From this select the required morsel (if too small to handle use a pair of steel "tweezers," or grippers), and after first dipping it into strong cement, affix it in its proper place on the drawing, using care if there is "good" side to the fragment, that it be next to the paper.

When the pattern is entirely covered, pour liquid cement over the back of it, the mosaic being now upside down, with its pattern side covered by the paper, so that the whole adheres in one concrete mass.

When this is thoroughly dry the cement is scraped down to an even surface, the paper pattern washed off, and the panel ready to set into its allotted place on wall or floor, using a bed of plaster of Paris, as in the first instance.

When you wish to repeat one pattern a number of times, the labor of redrawing each pattern may be reduced by placing several sheets of paper under one another, pricking through the outline of the design with a needle into the under sheets; this may also be done by using the pattern-wheel spoken of and illustrated above.

When a wall surface is to be decorated, this process last mentioned may be used to great advantage, and a whole wall may thus be covered by laying out the work in sections, instead of trying to do the work directly on the wall, which would necessitate much labor and unnecessary waste of time.

A large pattern may be made and divided off into sections that may be easily handled. For wall decoration in mosaic, some beautiful effects may be obtained by the use of bits of stained glass, so rich and varied is the covering and quality of this rich material. By using "opaque" glass this light is not necessary behind it to give the desired effect, as the irregularities of surface and rich creamy colors will give all the richness of effect required. If refraction is desirable in some dark corner, cement your pieces of transparent colored glass on to a piece of looking-glass, and reflected light will bring about all the brilliancy you could desire.

Care must be taken, in the first process described, in selecting materials of the same degree of hardness, as otherwise the soft ones are rubbed into a whole before the harder ones are ground down to a level surface in the final operation.

FIG. 6.—A BUREAU BOOKCASE.

FIG. 7.—A BUREAU BOOKCASE.

THE DECORATOR AND FURNISHER.

Now, why is it not possible in these days of home decorative culture to use this beautiful and refined method of decorating? To be sure it should not be used to excess, and the difficulties in producing it would to a great measure obviate that trouble; but here and there a bit of this beautiful and delicate home work, if executed with mechanical nicety and carried out with artistic refinement, would be a gem in a casket of pearls.

The writer can only suggest the possibilities and the method of employing screens, but all depends upon the execution; for if clumsy and rude, of badly selected materials and colors, it is but a blot, an eyesore. Do not get discouraged if the first attempt is not all you wish, but try again, with hopes of better luck next time.

THE difficulty in arranging the bric-a-brac, pictures, and movable articles in a room is that people do not know what they are after. They don't understand the theory of arrangement,

EXCELLENT provision may be made for loose papers and magazines in this way: Invest a dollar in a simple bamboo rack, and in the popular fashion of the day paint it with brilliant scarlet or deep yellow Japan paint. Only rich full colors are well adapted to the black and white of ordinary literature gotten up in haste, and too apt to deposit a slight black dust on white or delicate tints.

The joints of the bamboo may be touched with gilding or with colored bronze, yielding an effect worthy extra pains and caretaking. A rich bow of scarlet or yellow ribbon to match the paint, tied at one side or both of the little rack, adds greatly to its appearance. A unique idea is to purchase several dozen tiny bells in various colors, to be bought for a few cents a dozen at any fancy goods shop; string these on a small silken cord to match the ribbon, and twist the cord about the several rods which form the rack; or it may be put around the lower rod only, making a row of jingling bright bells, like fringe at the bottom. What if they do suggest "the fair Ophelia," "Sweet

FIG. 6.—BEDROOM FURNITURE.

and results are consequently hap-hazard—sometimes good and sometimes bad. Now, the human face preserves certain defined rules of expression that can be literally followed in matters of house decoration. Thus: When the lines which form the mouth and eyes remain parallel with the lines of the nose, then the face is in repose; when the lines are lengthened to form downward angles the face expresses joy; when lengthened to form upward angles, grief is depicted. Apply these principles to your home surroundings, and the expression will be the same. Straight lines, as well as curved lines, produce the effect of solidity, durability and support. On this principle wainscotings, doors, and mantels are built in straight and curved lines. But it would be manifestly wrong to furnish a mantel with ornaments, whose tops or proportions give a rounding or straight effect, unless you desire such a room to be stiff and prim.

bells jangled out of tune," or a gushing brooklet, babbling as perhaps may some of the loose sheets among the well kept contents of the little rack?

It is true that books are better preserved by being shut up behind glass doors, but they do not yield half their benefits in this way. Even a single shelf of books adds to the coziness of a room, and the home that is fully organized will have such a shelf in the guest chamber, as well as in other rooms. A book is often a great boon to a visitor, who may, perhaps, have risen too early for breakfast, or enjoys a solitary hour with some good reading before retiring for the night. If there are a great number of books in the house, and there is no library, be sure and have them arranged in an open bookcase in the parlors. A bookcase can be made of pine boards and stained. With a pretty, straight cover across the top and hanging over the sides, it will be the most attractive object in the room.

THE DECORATOR AND FURNISHER costs only \$4 per year.
